Music Generation in ArtToMusic

Rafael De Smet

February 22, 2017

So far I have been able to incorporate the RGB analysis and the edge detection algorithms in the graphical analysis part of the program. The color analysis determines the chord progression (see file musicGeneration.pdf) and the edge detection determines the tempo in which the chords are played.

Now I'm working on getting the right entropy value of an image so I can use this to determine how busy or how calm the music will be.
